

SOFTWARE ENGINEERING

ASSIGNMENT :1

NAME:NIDHI R

SRN:PES1UG24CS582

CLASS J

Use-Case Flow Specification

Use Case: Place Hold Request

Primary Actor: Student Member

1. Preconditions

1. Student Member is authenticated.
2. The requested book exists in the ISBN repository.
3. The book is currently loaned.
4. Student has not reached the maximum reservation limit.

2. Postconditions

1. The hold request is successfully recorded.
2. The student is assigned a FIFO queue position.
3. The reservation status is displayed to the student.

3. Main Success Scenario

1. Student Member searches for a book using its ISBN or title.
2. System displays the matching book details.
3. Student selects the currently loaned book.
4. Student selects **Place Hold**.
5. System verifies the student's account and reservation limit.
6. System checks the existing FIFO reservation queue.
7. System adds the student to the end of the queue.
8. System assigns the correct queue position.
9. System displays the reservation confirmation and queue position.
10. Use case ends successfully.

4. Alternate Flow — Maximum Reservation Limit Reached

5a. Student has reached the maximum reservation limit.

1. System detects that the maximum limit has been reached.
2. System rejects the hold request.
3. System displays an appropriate message to the student.
4. No new queue entry is created.
5. Use case ends.
